

SHIPPERGUIDE TMS INTEGRATIONS

Integrate Your Supply Chain for Improved Efficiency and Better Results

Connect your internal or 3rd party systems to ShipperGuide TMS to create the optimal transportation management system for your logistics operation. By integrating the tools you use each day, your team can work more efficiently, achieve better visibility across the supply chain, and make more informed decisions on freight spend. Here are some of the ways you can enhance ShipperGuide TMS via integrations.

CARRIER INTEGRATION

Automate the exchange of data by establishing a connection directly to your carriers via an EDI integration. This enables you to quickly begin tendering, tracking, and invoicing, all within a single, easy-to-use platform.

ERP AND ORDER INTEGRATION

Send order and shipment information from your ERP directly into ShipperGuide TMS to start scheduling shipments without manually entering shipment details. Shipment updates and documents are also automatically reflected in your ERP.

VISIBILITY AND SHIPMENT TRACKING

Connect your visibility and shipment tracking software to update location statuses in ShipperGuide in near real-time. Maintain full visibility to your freight without the hassle of moving between different systems.

BENCHMARKING DATA

Integrate with data providers, like FreightWaves SONAR, to access market-rate benchmarking directly within ShipperGuide TMS. Use this data to make more informed decisions when selecting shipment coverage to save money on freight.
